Schematics

Test Method

1. Test Ability Executive standard: IEC 61643-11: 2011, GB 18802.1-2011.
2. Test Port: L-PE, N-PE.
3. Three groups of five impulses of 8/20 current impulses with positive polarity shall be applied. Each impulse shall be synchronized to the power frequency. The test samples are connected to U_c . Starting from 0° the synchronization angle shall be increased in steps of 30° with a tolerance of $\pm 5^\circ$ for each synchronization angle. The tests are described in Figure.
4. The interval between the impulses is 50 s – 60 s, the interval between the groups is 25 min – 35 min.
